

AI Hunter UI Inspo - Initial

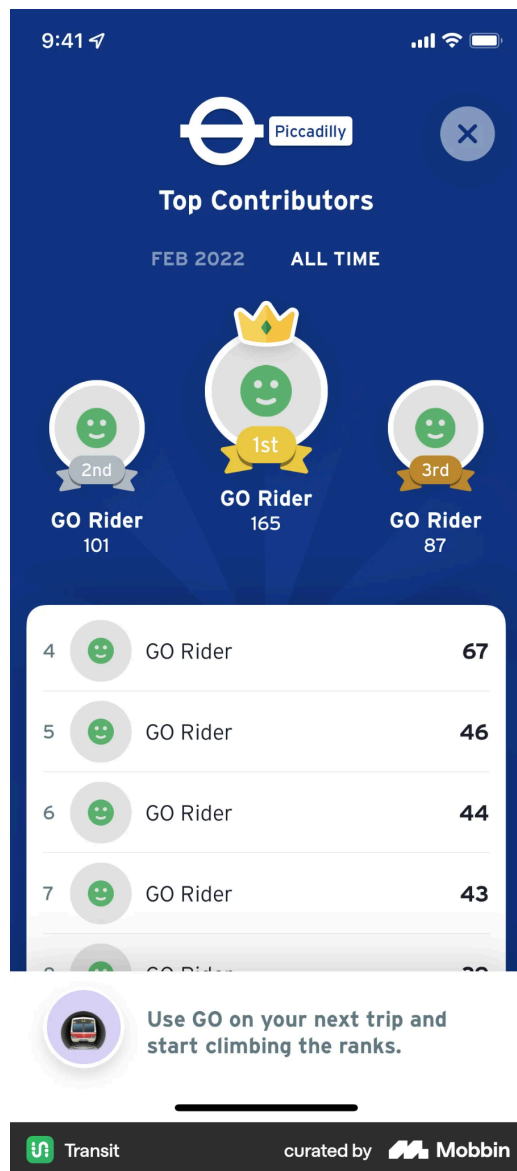

Wishbone - main inspo regarding the percentages but it also does the side by side cards well.

Bumble - the curved corner on the cards with the minimal icons on the bottom for your profile and the other parts of the app look really great.

Here too for Bumble, again, those curved corners are really nice. If these were two side-by-side cards, it'd be perfect for what we are building. I also like the little buttons on the bottom, which could be good for navigating to your profile or something else. Yeah, that looks really nice.

Transit - leaderboards

Top 20 advance to the next league

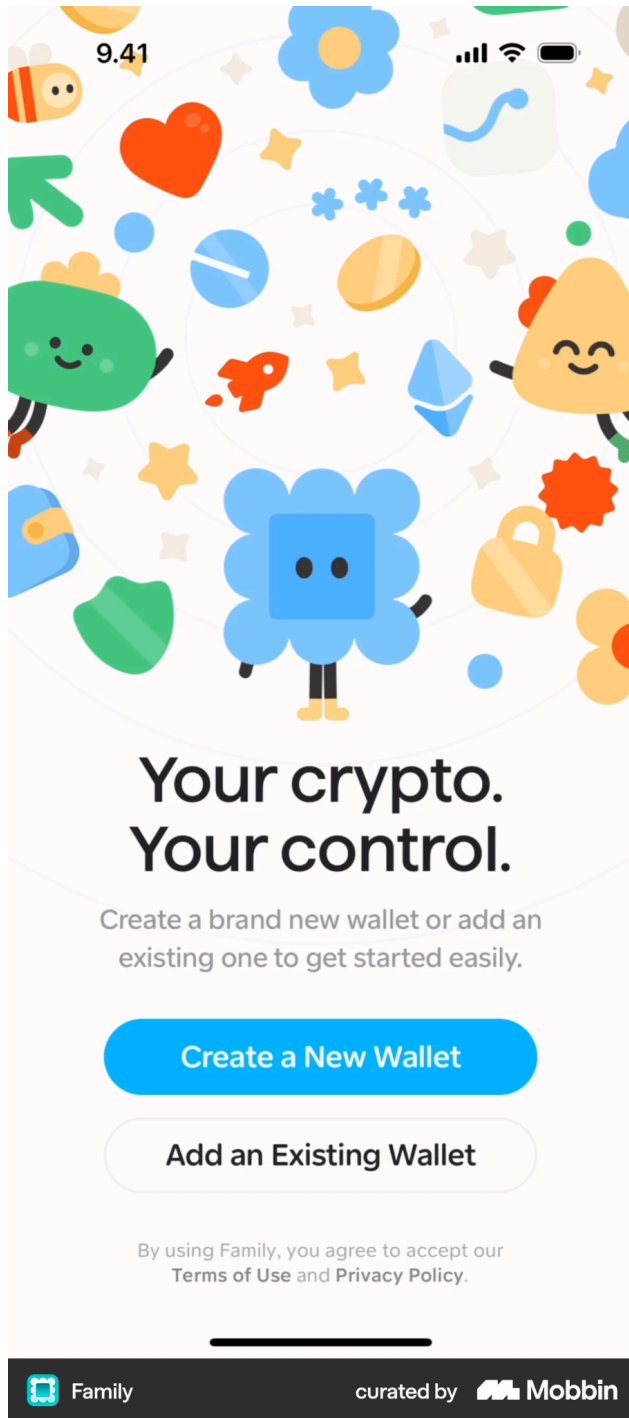

3 days

1	Д	Дарья	1613 XP
2	P	ph.zTZaOV	620 XP
3		True Love	486 XP
4		Judy	375 XP
5	M	Mansi	318 XP
6	R	Rong Trần Van	318 XP
7	A	Anamika	225 XP

Duolingo - leaderboards as well as main selection cards and general vibe. The onboarding is also amazing and should be a big inspo

Family - This app has a beautiful animated opening screen, and something like that would be really cool every time you open the app. That has a really cool animated sort of logo and iconography.

Version 25.19.3 (204252)

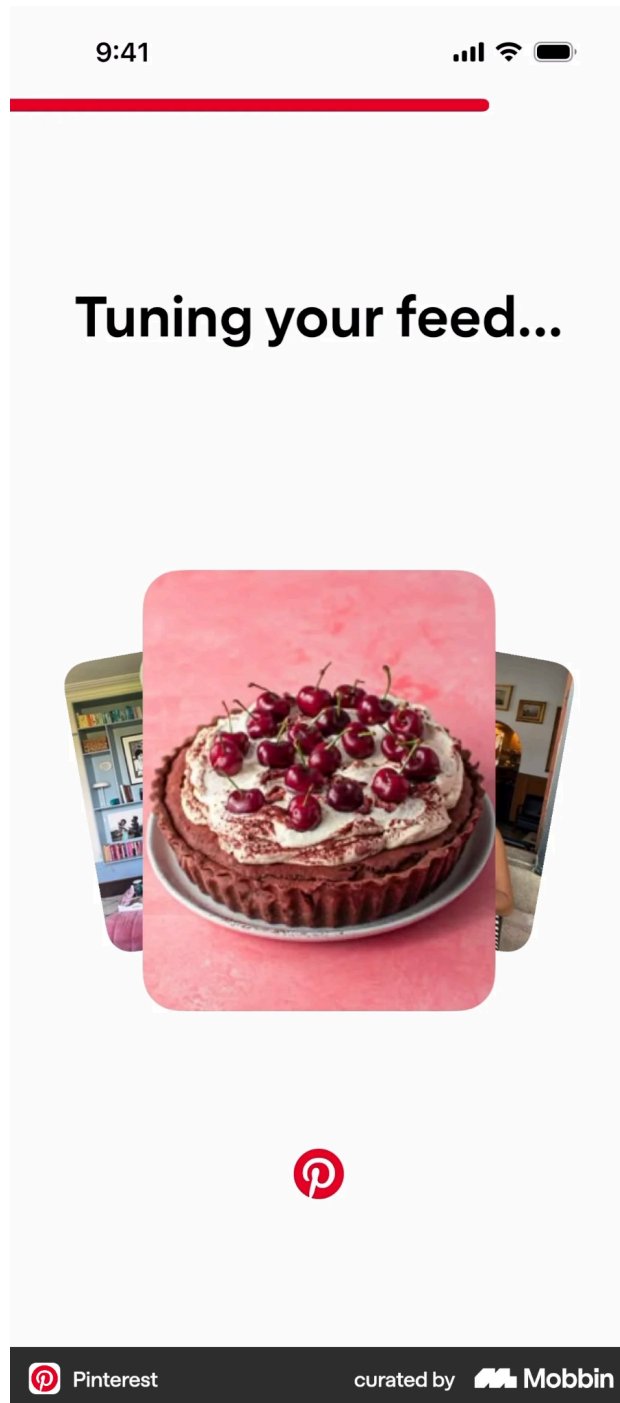

Airbnb

curated by

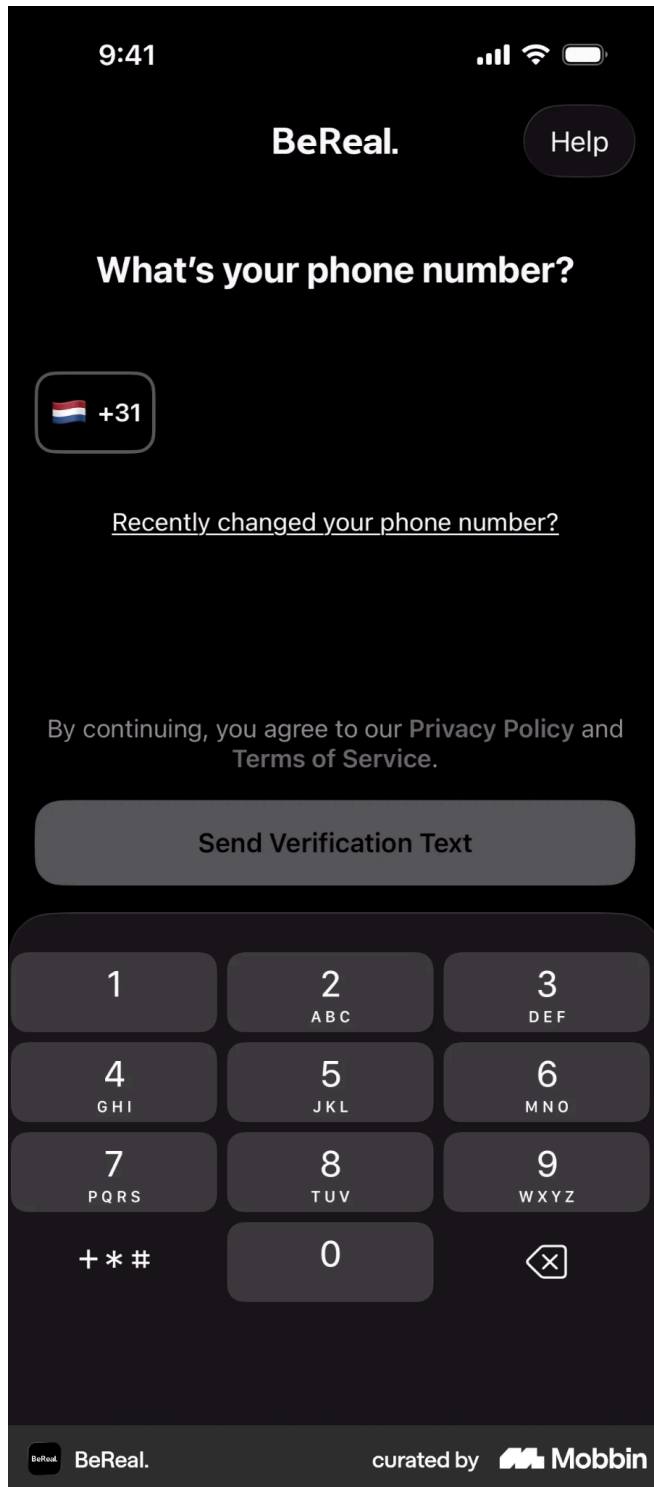

Mobbin

Airbnb - The account settings page on Airbnb is really nice and clean and minimal. I also like their fonts. Not saying I want to go with this exact one, but I like how this looks a lot in terms of vibe and what not.

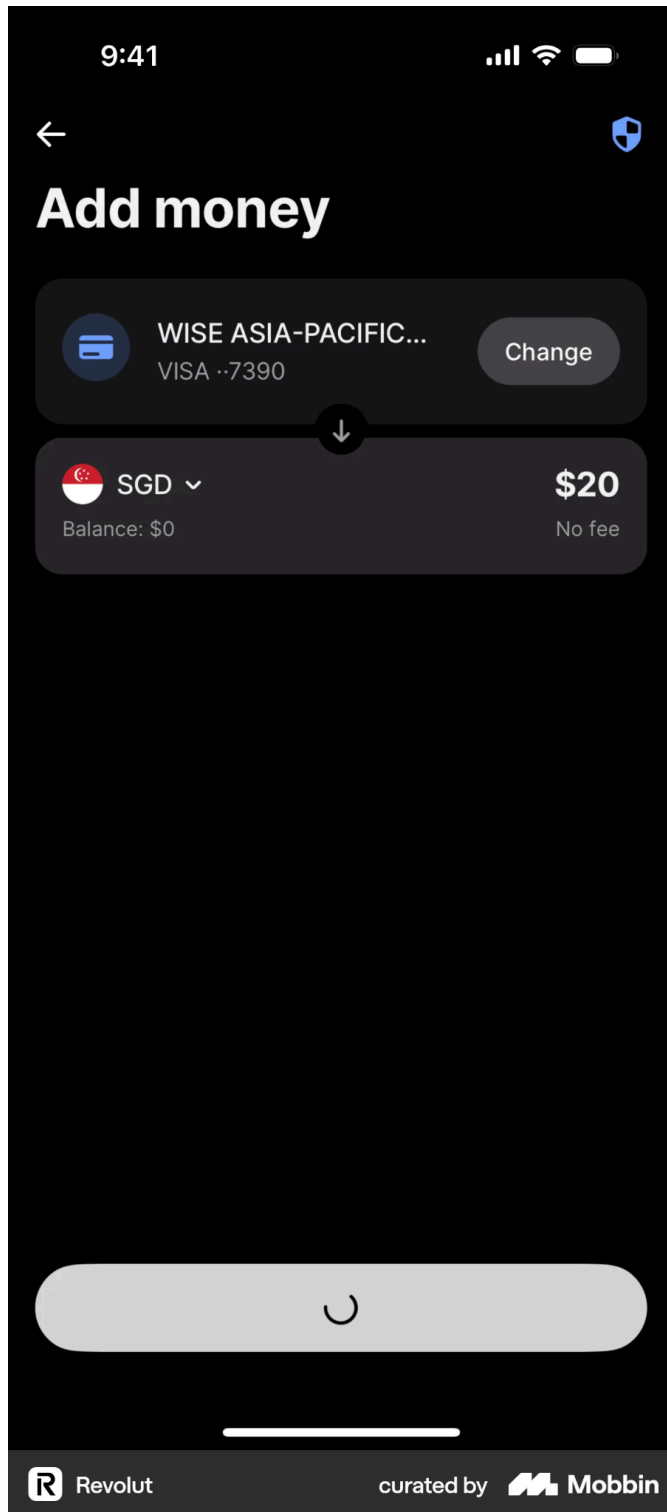

Pinterest - Pinterest has this lovely red bar at the top of the screen, which looks really nice. I would be curious if maybe we could experiment with a bar at the top that dictates whether or not you're on a streak of getting cards right or wrong. Sort of like on Duolingo, when you get a certain amount of questions correct in a row, but just something really minimal at the top that

kind of goes up and turns into a fiery sort of bar when you've got more than five in a row or something like that. It might be able to play into the psychology of people wanting to get things right and the whole ELO system and algorithm we're trying to create with that. It's not something that I'm 100% set on, but an initial idea I had, and this red bar could be kind of a similar vibe for that.

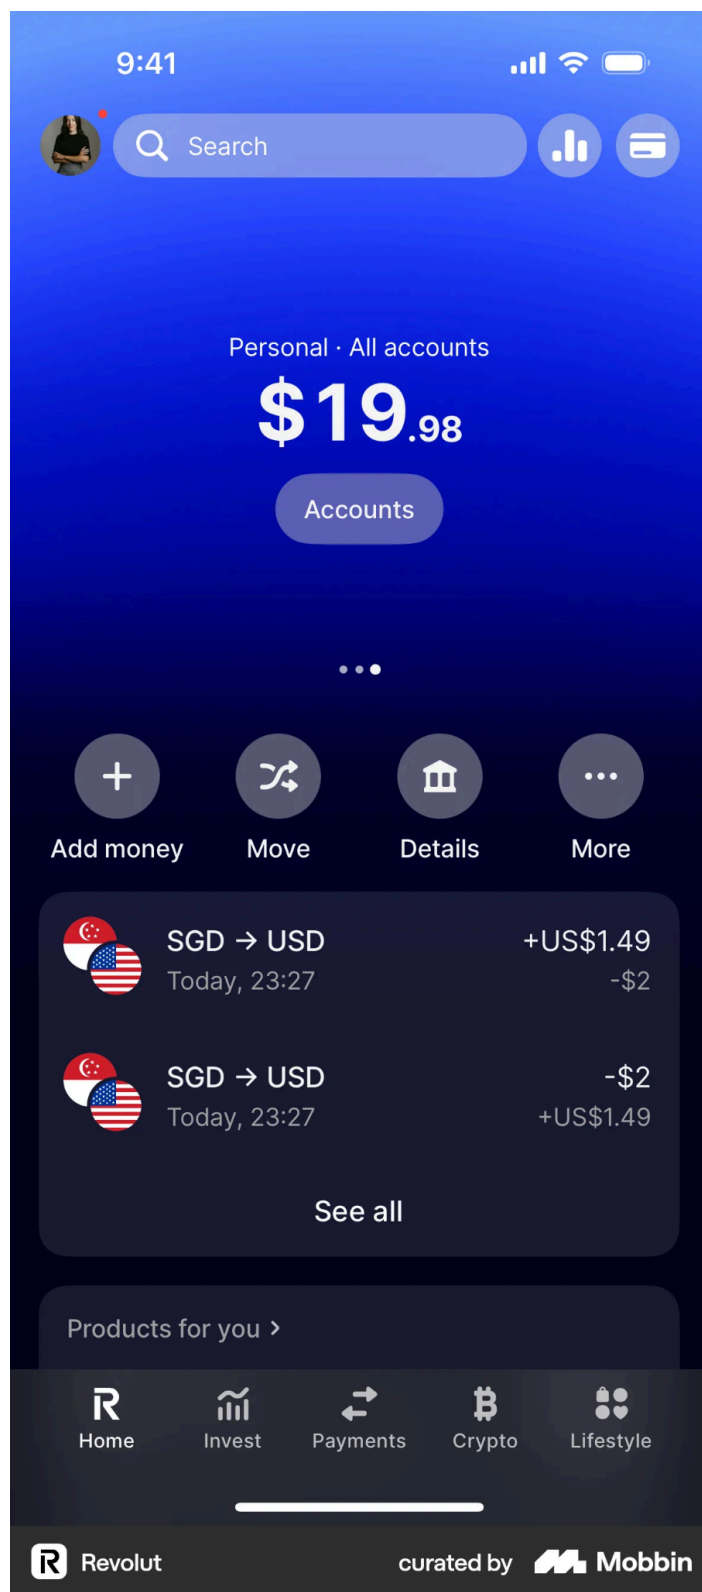

BeReal. - The dark mode and simplicity of BeReal for the onboarding, as well as just in general in the app, is really, really nice. I also like the curved corners when it comes to taking the photos and their other UI elements.

Revolut - Similar to b-roll in terms of the dark mode being very nice and minimalist. I like this a lot and can imagine the account screen with the settings and stuff kind of look like this, which is like the simple darkness.

Again, I also really like these rounded corners on all of the different icons and buttons. I think that's really nice and fits this vibe that we're going for with AI hunter.

Here's just another example from Revolut as well. Here, I think this gradient looks really nice. I am concerned about adding gradients, though, especially

when it comes to AI-vine-coated stuff. Oftentimes, that purple-pink gradient with a black background shows up way too often and looks really poor, but a gradient could be something to think about for maybe the profile screen or leaderboards or something like that. I'm not married to the idea, but maybe something worth experimenting with because it looks really nice here.

Fonts

I am currently between Space Grotesk or Funnel Sans for the font. This is a really important part, and it's worth playing around with. I also like DM sans; however, I feel like it's a little bit too close to inter. I have downloaded Space Grotesk and Funnel Sans to my macbook.
